

Senior Scientist in Structural Biophysics

I am a passionate scientist with over 6 years of experience in structural biology and biomolecular characterization. I am eager to apply my expertise in biophysical analysis and advanced analytical methods to support therapeutic development. Motivated by scientific excellence and collaborative research, I enjoy solving complex analytical challenges and contributing to multidisciplinary programs that advance human health.

SKILLS

Project & Scientific Management

- Scientific project management
- Experimental design
- Results reporting & Technical report writing
- External partner management
- Team supervision, training and mentoring

Digital

- Programming (Python3, R, bash)
- Structural biology (PyMOL, Gromacs)
- Sequence Analysis (Blast, Clustal, Prosite)

Biophysics

- Stability and Hydrodynamic characterization - Protein / RNA (UV melting, DSC, DSF, HPLC-SEC, CE)
- Structural characterization - Protein / RNA (CD, SAXS, Chemical Probing, X-ray crystallography, NMR)
- Interaction studies - Protein / RNA / Small molecules (BLI, SPR, ITC)

Molecular Biology

- Recombinant protein expression and purification
- RNA / in-vitro transcription and purification

EDUCATION

PhD Structural Biochemistry

Aix-Marseille Université FRANCE
2016 - 2019

MSc in Bioinformatics and Structural Biochemistry

Aix-Marseille Université FRANCE
2014 - 2016

LANGUAGES

English (Fluent) French (Fluent)

COMMUNICATIONS

GDR RNA Meeting - 2025

Selected presentation + Poster
Best poster presentation Price

Alpbach Workshop - 2022

Coiled-Coil, Fibrous and Repeat Proteins
Selected presentation

PROFESSIONAL EXPERIENCE

Postdoctoral Researcher

CNRS – IBMC, Strasbourg, FRANCE

2023 - 2025

Project Manager specializing in analytical characterization, in partnership with SERVIER Pharmaceuticals. Led the protein and RNA production workflows and their biochemical and biophysical characterization.

Postdoctoral Researcher

Max-Planck Institute for Biology, Tübingen, GERMANY

2020 - 2022

Project Manager leading the design and execution of protein production, analysis and structural characterization.

PhD Candidate

CNRS – AFMB, Marseille, FRANCE

2016 - 2019

Responsible for the production and biochemical analysis of a measles virus phosphoprotein mutants library.

PUBLICATIONS

TDP-43 unwinds RNA structures upon binding onto STMN2 cryptic exon 2a

2025

In preparation

Project manager responsible for project design, supervision and efforts coordination in collaboration with SERVIER

Regulation of measles virus gene expression by P protein coiled-coil properties

2019

Science Advances

Scientist responsible for the biochemical characterization within a multidisciplinary collaborative project.

An Arsenal of methods for the experimental characterization of intrinsically disordered proteins

2019

Archives of Biochemistry and Biophysics

Review of biophysical methods for analytical development applied to a specific protein class
